case IV

Bio-MEM is non-resorbable PTFE membrane made of Micro Pore PTFE and Titanium preventing growth of bacteria while being facilitating cellular adhesion to the surface and plasma protein absorption upon implantation.

## FEATURES & ADVANTAGES

### **Titanium-reinforced Micro Pore PTFE membrane**

- Easy to handle and make the shape for tenting & space maintenance

### **Impermeable to Bacteria**

- Micro Pore PTFE prevents migration of bacteria into wound

### **Reduced detachment of membrane**

- Bio-MEM reduced separation of membrane when removal a membrane

### **Open Membrane Technique**

- Primary closure is not essential

### **Easy to fix**

- Can be fixed with Fixing screw, Bone screw, Bone Tac and Fixture
