hours

Key Learning Outcomes

Periodontics

- Understanding the literature of prognosticating periodontally compromised dentition
- What are some of the factors periodontists assess to diagnose the prognosis of the tooth?
- Additional considerations before deciding whether save or remove teeth

Endodontics

- Understanding the basic sciences in relation to endodontic diagnosis
- This matters to aid during pre, mid and post operation pain management
- Important information when using medication as an adjunct to odontogenic pain management.
